PROFESSIONAL PROFILE

Technical Business Analyst with a web and low-code development background and five years of experience in business administration, document management and internal enterprise systems, as well as web applications. Through client interviews and meetings I elicit and refine business requirements, produce functional specifications, process and data models, and then either hand the solution over to the development team or build it myself: currently in a JavaScript-based low-code framework with SQL, MongoDB and REST API integrations, previously in PHP/Symfony and JavaScript. I have designed and delivered several projects from discovery to handover. I work with a self-built, AI-driven workflow grounded in professional rules, which makes my work more accurate and efficient from specification to testing.

CORE COMPETENCIES

REQUIREMENTS ELICITATION
client interviews and meetings, requirements breakdown, acceptance criteria, backlog management

SPECIFICATION
functional specifications, data model descriptions and development documentation

MODELLING
BPMN process models, UML, domain and relational data models, entity relationships

SYSTEM LOGIC
roles, permissions, status workflows, business rules and screen logic

IMPLEMENTATION
JavaScript, SQL, MongoDB, REST API integrations, low-code workflows; previously PHP/Symfony, React

HANDOVER AND TESTING
developer handover, testing, UAT support and client demos

PROFESSIONAL EXPERIENCE

Spartan Code Zrt.

Technical Business Analyst / Low-code Developer

2024 – 2026

- Gather requirements for document management, business administration and internal enterprise systems through client interviews and meetings; worked on 2 client and 2 internal projects to date.
- Write functional specifications, data model descriptions and acceptance criteria; manage tasks in a Jira backlog and hand them over to the development team within an agile (Scrum) framework.
- Design domain and relational data models, status workflows, permission rules and user interfaces (Figma, draw.io).
- Implement forms, workflows and business logic in the company's in-house, JavaScript-based low-code framework, and write SQL and MongoDB queries.
- Assess, implement and connect REST API integrations; integrated document management via a REST API in a public-authority system.
- Test the framework, propose fixes and improvements to it, and verify the fixes.
- Run client demos, hold technical meetings with partners, and support testing and user acceptance (UAT).

Echobase Kft.

Web Developer and Business Planner

2021 – 2024

- Developed the business concept and system design of web applications; broke requirements down into development tasks and prioritised them.
- Also worked on implementation as a developer, coding web application features in PHP, Symfony, Twig, JavaScript and HTML.
- Built the QuizStar scoring system as a working front-end application with ViteJS, running in a local environment.
- Prepared business plans, prototypes, MVPs and pitch decks for startup and innovation projects; presented the plan for PropSetNet, a sales web application, to 5–10 investors as part of a university startup programme.

EARLIER TECHNICAL AND IT EXPERIENCE

Flex (Flextronics) – Axis product line · 2018 – 2020
Diagnostic Operator / Technician – Diagnosis, fault-finding and repair of industrial and security IP cameras and other electronic products in a documented manufacturing environment.

Gastland Flight Catering · 2017 – 2018
IT Administrator / Point of Contact – Windows and Linux support, hardware maintenance, end-user support, and support in setting up and running a Linux-based mail server.

SELECTED PROJECTS AND PORTFOLIO

Transport Infrastructure – Public-Authority Case Management System

Spartan Code Zrt., client project | business analysis | document management | REST API integration

Large-scale public-authority case management system with several subsystems: a public client portal (also serving clients abroad) and an internal caseworker system. I mapped document management to the business requirements and integrated it via a REST API, so it follows each case across every subsystem.

Project Planning Support System

Spartan Code Zrt. | independent design and delivery | business analysis | system design

A system for the structured registration of projects, applications and system components, which I designed and delivered from discovery to handover. It automatically generates documentation and diagrams from the recorded data.

Winzard – Specification-Driven Application Production Platform

Personal project, since July 2026 | TypeScript, Next.js, Prisma, PostgreSQL, Docker | private repository

My own framework and production pipeline that builds applications in a verified way from an approved business specification (ApplicationSpec, UML): data model, Prisma schema, permissions, workflows and tests. 50 reusable modules (authentication, LDAP/AD, mail, notifications, scheduler), automated verification based on 47 acceptance cases, human approval and UAT release. 2,100+ commits, 130+ merged PRs.

AI Workbench – Rule-Driven AI Workflow

Personal project, since October 2026 | Claude Code, Codex, MCP | PostgreSQL, TypeScript

Guides the work of AI agents through the development process along professional rules: ticketing, conflict handling for parallel sessions, rule gates, model selection, effort tracking, review and a learning loop. I evolved the first, file-based version (Markdown, YAML, scripts) into a PostgreSQL-based service and MCP server; Winzard is developed on it. My goal is to extend the approach to other professions.

Real Estate Portal – Public Portal and Internal CRM Concept

Personal project | product and data model design | React / Next.js | ingatlan-portal-five.vercel.app

Working demo combining property search, agent and agency pages, and an internal CRM workspace in one system.

CityPlan – Website

Personal project | vanilla JavaScript and HTML, no framework | cityplan.hu

TOOLS AND TECHNOLOGIES

ANALYSIS AND DESIGN
Jira, Confluence, Figma, draw.io

METHODOLOGY
Agile / Scrum, BPMN, UML, UAT

DAILY DEVELOPMENT
JavaScript, SQL, MongoDB, REST API, in-house low-code framework, Git, Postman

PERSONAL PROJECTS
TypeScript, React, Next.js, Prisma, PostgreSQL, Docker, Tailwind CSS, Vitest, Playwright

PREVIOUS AND SUPPLEMENTARY
PHP, Symfony, Twig, ViteJS; Windows and Linux administration basics

AI AND AUTOMATION
Claude Code, Codex, MCP servers, rule-driven orchestration of AI agents, GitHub Actions

EDUCATION, LANGUAGES AND OTHER

EDUCATION

Óbuda University, John von Neumann Faculty of Informatics
Computer Engineering BSc – from 2017, not completed

Kölcsey Ferenc Grammar School, Budapest
Hungarian–French bilingual programme, 2009–2015; secondary school leaving exam in IT

Városliget Hungarian–English Bilingual Primary School, Budapest
Hungarian–English bilingual programme

LANGUAGES AND OTHER

Hungarian: native
English: B2 (upper intermediate)
French: basic
Other: category B driving licence
